(54) Title: A LAMP AND A METHOD OF ATTACHING A BURNER TO A CAP OF LAMP

(57) Abstract: A lamp comprising a cap (6) and a burner (1) attached to the cap, the burner (1) and the cap (6) being connected through a metal part (3), which part engages the burner (1). The metal part (3) has at least two legs (5), preferably three legs (5), such that a portion of each leg engages a corresponding portion of the cap (6). Said corresponding portion is made of synthetic resin material. Said portion of each leg (5) has been heated in order to melt the synthetic resin material and to deform it so as to correspond to the shape of the leg, whereby a mutual engagement of said portion of the leg (5) and said corresponding portion of the cap (6) is obtained.
